What is „LO“ and „REX“ in the pedigree number?

LO = Live d'Original. It's a LO when there are 4 generations of the same breed or allowed crossings within the WCF.

REX = Register Initial et Experimental. REX is used when there aren't full 4 generations of the same breed or unallowed breed crossings. It is also a REX when bred or its parents has a non recognized color within the WCF or is a non recognized breed. In case of a non recognized breed it's used: XHL (non recognized hairless), XSH (non recognized shorthair) or XLH (non recognized longhair) instead of a breed code. Before any color or breed is recognized by WCF, it's REX. Only after breed or color recognition by WCF the cat can be registered as LO.
